

Ishan Girgaonkar

San Jose, CA | (669)-230-9356 | girgaonkarik99@gmail.com | [LinkedIn](#)

SUMMARY

Entry-level AI/ML engineer with experience in machine learning research and software development. Skilled in Python, TensorFlow, Docker and Kubernetes, with a proven record of building an 85% accurate computer vision model and optimizing backend workflows to reduce API latency by 50%. Familiar with data pipelines and containerized deployments for scalable AI solutions.

EDUCATION

San Jose State University

Master of Science, Computer Engineering

Aug 2023 - Dec 2025

San Jose, CA

- **Coursework:** Computer Architecture, System software, Software Quality Assurance and Testing, Machine Learning

Vishwakarma Institute of Technology

Bachelor of Technology, Electronics Engineering

Aug 2018 - Aug 2022

Pune, MH, India

- **Coursework:** Natural Language Processing, Object Oriented Programming, Data Structure and Algorithm, Cloud Computing

SKILLS

- **Programming Languages:** C++, Python, Java, C language, Golang, Kotlin, Scala, JavaScript, TypeScript
- **Web Technologies & Database:** AWS, Node.js, React.js, Next.js, Angular, HTML5, CSS, MySQL, MongoDB, PostgreSQL
- **Frameworks, Tools & Technologies:** Kubernetes, Docker, Copilot, GitHub, Visual Studio, Cursor, Selenium, Jenkins, TensorFlow, ML Frameworks
- **Machine Learning & MLOps:** Large Language Models, Model Evaluation, Algorithm Design, Data Processing Pipelines, MLOps, Model Deployment, Model Monitoring, Prompt Engineering, Fine-tuning

EXPERIENCE

Cognizant Technology | *Programmer Analyst Trainee*

Sep 2022 - Jun 2023

- Designed modular UI navigation components using Angular and CSS, and integrated Java-based RESTful services to ensure maintainable data flow across the application, which improved code reuse and reduced UI bugs
- Optimized data processing pipelines for a healthcare client by refactoring backend logic, improving API response times and reducing latency by 50%.
- Reduced post deployment technical issues by 20% by partnering with the customer care team to revamp incident management and integrate MLOps practices.
- Proactively identified areas for process improvement within quality management framework and assurance.

Software Engineer Intern

Feb 2022 - Sep 2022

- Developed a salary and loan calculation system using Java, implementing robust backend logic, data validation, and business-rule enforcement, which reduced calculation errors and improved processing speed
- Worked in cross-functional teams to monitor system performance, refine model deployment strategy, and improve performance stability.
- Gained insights into SAP quality management systems and established model monitoring processes from material creation through dispatch.

Vishwakarma Institute of Technology | *AI-ML Research Intern*

Aug 2021 - Jan 2022

- Implemented a Python-based computer-vision model using TensorFlow and OpenCV within Docker containers to monitor elderly individuals living alone, providing real-time alerts to caregivers when unsafe conditions are detected.
- Utilized the concept of BoVW a Computer Vision methodology, implemented with ORB for feature detection purposes.
- Model garnered accuracy of 85% over various classifiers such as KNN and decision tree and underwent rigorous model evaluation across 15,000 images.

PROJECTS

Learning Management Portal

Feb 2020 - May 2020

- Designed a distributed and scalable learning-management portal capable of managing 10k concurrent users.
- Improved application performance by 70% by distributing backend, and front-end servers on AWS with load balancers.
- Enhanced system reliability and scalability by introducing event driven communication using kafka, improving fault tolerance

Diabetic Retinopathy Detection

Aug 2024 - Jan 2025

- Collaborated with a team of four to build a TensorFlow model in Python that analyzes fundus images and classifies retinopathy severity levels
- Developed an OpenCV-based data processing pipeline to convert fundus images to grayscale and extract features such as vessel patterns, blobs, and optic disc size
- Evaluated multiple classifiers (random forest, decision tree, Naïve Bayes) using scikit-learn's model evaluation metrics, achieving 81% accuracy

PUBLICATION

- Text Chatting App Including Kanban Board.*Developed a web-based chatting platform enhanced with collaborative workplace tools, including an integrated Kanban board. Implemented content moderation features such as foul-language detection to promote safe and productive communication. Built a scalable full-stack architecture to support task management workflow*
